### Abstract

Go to:

Following the global rollout and administration of the Pfizer Inc./BioNTech BNT162b2 and Moderna mRNA-1273 vaccines on December 17, 2020, in the United States, and of the Janssen Ad26.COV2.S product on April 1<sup>st</sup>, 2021, in an unprecedented manner, hundreds of thousands of individuals have reported adverse events (AEs) using the Vaccine Adverse Events Reports System (VAERS). We used VAERS data to examine cardiac AEs, primarily myocarditis, reported following injection of the first or second dose of the COVID-19 injectable products. Myocarditis rates reported in VAERS were significantly higher in youths between the ages of 13 to 23 ( $p < 0.0001$ ) with ~80% occurring in males. Within 8 weeks of the public offering of COVID-19 products to the 12-15-year-old age group, we found 19 times the expected number of myocarditis cases in the vaccination volunteers over background myocarditis rates for this age group. In addition, a 5-fold increase in myocarditis rate was observed subsequent to dose 2 as opposed to dose 1 in 15-year-old males. A total of 67% of all cases occurred with BNT162b2. Of the total myocarditis AE reports, 6 individuals died (1.1%) and of these, 2 were under 20 years of age - 1 was 13. These findings suggest a markedly higher risk for myocarditis subsequent to COVID-19 injectable product use than for other known vaccines, and this is well above known background rates for myocarditis. COVID-19 injectable products are novel and have a genetic, pathogenic mechanism of action causing uncontrolled expression of SARS-CoV-2 spike protein within human cells. When you combine this fact with the temporal relationship of AE occurrence and reporting, biological plausibility of cause and effect, and the fact that these data are internally and externally consistent with emerging sources of clinical data, it supports a conclusion that the COVID-19 biological products are deterministic for the myocarditis cases observed after injection.

Who will save my kids?

## A MESSAGE FROM ICAN CEO, DEL BIGTREE

Good morning, California! ICAN will be suing your governor!

Your governor has effectively deemed every parent in your state unfit! He has decided that none of you can decide for yourselves whether or not your child should get a Covid-19 vaccine. He has made the [decision](#) from on high! You **must** give each of your children the vaccine (2 doses for now, how many in the future?) which has not even been approved for children under 16 years old yet, or else they will be expelled from school. Worse yet, he implored other governors across the country to follow his dictatorial authoritarian lead and mandate the children of their states as well.

It is truly the height of authoritarianism to require children to receive a Covid-19 vaccine when:

1. It does not stop infection and transmission – it is possible personal protection, at best, and even that is rapidly failing!
2. The risks for children from the vaccine, including heart inflammation and other damage, far outweigh the risks of having Covid-19 (that is, if they haven't yet) – this is nothing short of child abuse.
3. If your child is injured from the vaccine, you cannot sue Pfizer. Meaning, the pharma company has more rights and protections than you do as a parent!

It is indeed a wake-up call and a reminder that these types of dictatorial mandates cannot stand. We are going to fight them in every way possible, including in the courts, no matter how many times it takes until the truth prevails and we regain our rights. If we don't stop them here, where will it end? Our hope is that it ends in California. Please help spread the word, and share this video: [thehighwire.com/videos/ican-set-to-sue-ca-governor-newsom/](https://thehighwire.com/videos/ican-set-to-sue-ca-governor-newsom/)

To follow our work on this and other important related topics, please tune into our weekly broadcast of the Highwire with Del Bigtree, Thursday's at 11am Pacific Time. See you there!
